Final project · Your Food Rescue system

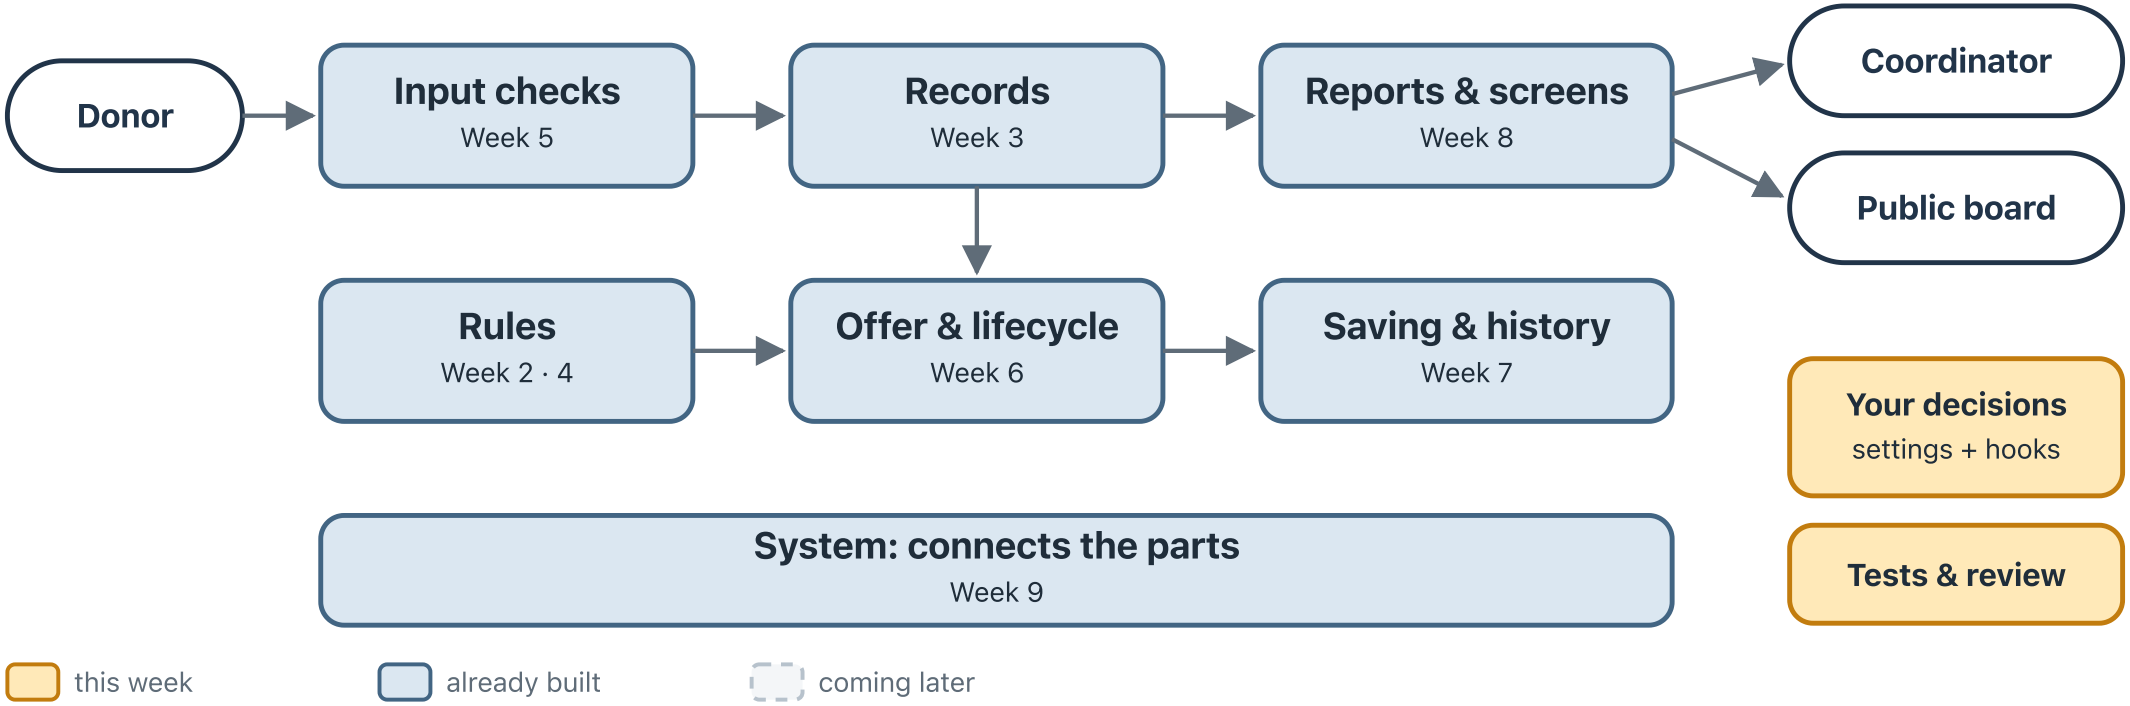

Weeks 9–10

Your parts · your decisions · your system

From parts to a system

Your Food Rescue system

Week 10: verify, hand over and present your system

Four levels

Level	What you do	
1 · Run it	default system, `verify()` all ✅	⭐ required
2 · Make it yours	≥ 3 decisions + decision log	⭐ required
3 · Extend	your own functions + tests	⭐⭐ optional
4 · Web page	your system in a browser, and at home	⭐⭐ optional

Level 2 · Your decisions

```
MY_SETTINGS = {
    "SYSTEM_NAME": "Battambang Food Share",   # a name only: not a decision
    "TEAM_PICKUP_MIN_PORTIONS": 25,
    "REJECT_IF_HOURS_LEFT_BELOW": 2,
    "PUBLIC_FIELDS": ["id", "food", "portions", "status"],
}
```

- At least **3** decisions; one about **privacy** (`PUBLIC_FIELDS`) or **input checks**.
- Keeping a default **on purpose** counts, if you explain why.
- **Try one offer** shows a decision the sample day does not reach.

A strong decision log entry

Setting	`PUBLIC_FIELDS` → id, food, portions, status
Alternative	also show `category`
Why	partners need what and how much; fewer fields, less to leak
Who is affected	partners cannot filter by category; donors stay private

> Weak: "I changed it to 25 because it is better." Better for whom? What is lost?

Level 3 · Extend (optional)

- A smarter rule or a stricter check, with **named constants**.
- An **honest number**: the share of offers rejected or cancelled.
- A new status such as `"reserved"`: a **known limit** (the reports drop it), so test and name it.
- At least **two tests**: a normal case and a boundary or odd case.

Level 4 · Web page (optional)

```
fr.start_web(my_system)              # opens your system in a new tab
fr.download_my_system(MY_SETTINGS, MY_HOOKS)   # a ZIP to run at home
```

At home: unzip → terminal in `food_rescue_kit` → `python run_web.py` → http://localhost:8000

Verify before you trust

- **Runtime → Restart session and run all**: every cell runs, in order.
- Your two **decision tests** in section 5: all ✅.
- `verify()`: kit checks ✅, and a report of **your** system.
- Review your code with the **ten principles**.
- A classmate can run it from your **handoff note** alone.

Week 10

Session	What happens
1	finish Levels 1–2, decision tests, optional 3–4, review with the checklist
2	**peer test**: a classmate runs your system from your note; then a 3-minute **presentation**
3	**individual check**: one decision, one test

Presentation · 3 minutes

1. The people and the problem
2. Your decisions (two or three: value, alternative, who is affected)
3. A short demo
4. What you tested
5. What you would improve next

Submit

- `Final_Project.ipynb` after **Runtime → Restart session and run all**
- Levels 1–2 complete · two decision tests ✅ · Levels 3–4 if done · handoff note · peer test record
- Email **submit.progmis@gmail.com** · deadline and file name announced in class
